Camera and Lighting Drift Monitor Report

Sharpness

Image sharpness is the clarity, crispness, and definition of fine details and edges within a photograph or digital image.

Brightness

Brightness measures the overall lightness or darkness of a digital image by changing red, green, and blue (RGB) pixel intensity values.

Feature Drift

Image feature drift is a shift in the statistical distribution, scale, sparsity, or visual characteristics of input image data in production compared to the baseline set used to train.
